

Real-time flight status and weather at a glance

Critical flight delay and cancellation information

Empower travellers and staff to plan around disruptions

Helpful weather information

Multilingual capabilities

Powerful maps inform & entertain

- **Air Traffic Live** – Airport current arrivals and departures with the option of current weather overlay. Helps travellers and those picking them up answer the question, “How close is the flight?”
- **Weather Live** – Current weather in an animated 4-hour loop, overlaid on a high-resolution map. Helps travellers understand weather-related travel disruptions and possible cascading delay effects on downstream flights.
- **Flight-In-Sight** – The exact location of an incoming flight to help answer the question “Where’s my plane?”. Gives travellers confidence to leave the gate and visit shops & restaurants while waiting for their plane to arrive.
- **Airport Delays** – Current, national or regional airport delay status with the option of current weather overlay. An early warning for managing day-of-travel disruptions and sets expectations for travellers, friends and colleagues. (North America only)
- **Flight Information Displays (FIDS)** – Current arrival and departure flight status for airport displays to enable travellers to react and re-plan.

“If travellers can see exactly why their flight is delayed, they can understand the reason behind the delay, which makes travelling easier.”

Rick Pelc, General Manager, Atlanta hub Southwest Airlines
