

Anticipate problems and manage fleets efficiently

View comprehensive flight details, aircraft position and ETA info

Set customised alerts based on flight or airport conditions

Save fuel, time & money - drive better planning of ground operations

Know exactly where your planes are, even in bad weather

Flight positions, airport status & weather in one view

- **Dispatch** – Comprehensive PC-based Aircraft Situation Display (ASD) with interactive tools and advanced weather visualisation helps you manage your fleet more efficiently.
 - **Alerts Manager** - Easily customise airport or flight alerts to notify you when a specific airport or flight departs, lands, is diverted or delayed.
 - **Flight Bulletin Board** - Quickly configure to track your company fleet. Filter by status - proposed, in-air and landed - and see delay departure status, time to arrival and distance to destination with one click.
 - **Complete Airport Information** - View in-depth information on specified airports: runways, weather, NOTAMs, METAR/TAF, airport diagrams & more.
 - **Enhanced Weather Overlays** - Advanced weather visualisations including AIRMET, SIGMET, TFR and more. Anticipate weather problems by viewing automatic weather looping for the past 6 hours.
- Currently this product is available for the North American market only.

“This supports airborne crews with routing and weather information to get our clients safely where they need to be & when they want to be there.”

Dan Smith, CitationAir (fmr.) VP of Flight Management
