

A unique archive of historical flight status data

Comprehensive information for quick analysis and planning

110k flights tracked daily

Simple search parameters and fast response times

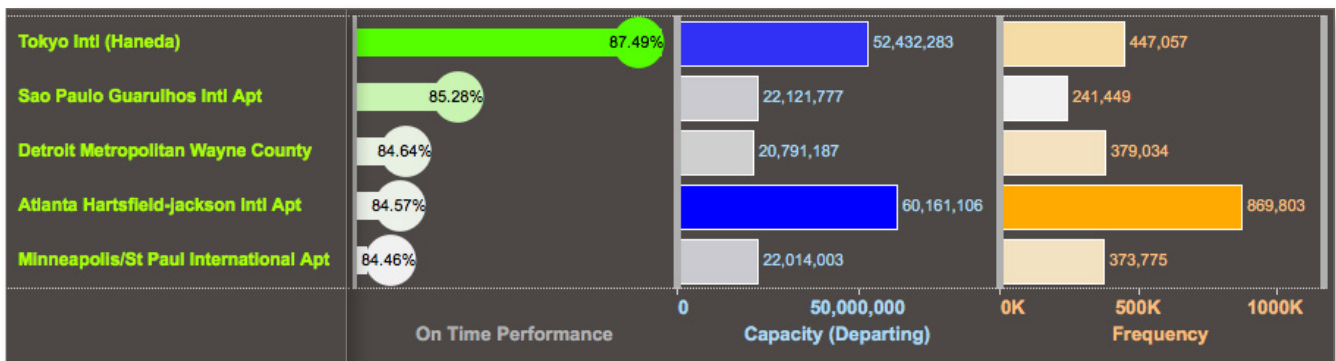

Unique access to flight status information dating back to 2004

Accurate historical data powers critical analysis

- **On-Time Performance Reports** – View flight performance times to schedule by airline, airport or specific flights over time, based on our comprehensive global flight tracking
- **Webservice** – Look up historical flight status for a single flight or flights along a route with fast and simple search, available 48 hours after the flight. GUI displays on-screen with export to Excel option
- **Daily Flight Leg & Landing Reports** – View selected records of past flights filtered to geographies, airlines and more to analyse irregular operations or events, or view lists of all flights which arrive at a certain airport
- **Custom Flight Reports** – We tailor reports to your needs. Leverage our deep archive to power critical analysis for business decisions, including advanced visualisations, analysis, dashboard & models

“These high-level data reports deliver a level of granularity that gives us valuable insights for effectively addressing market & customer needs.”
